ai) Manual Calculations

given Data

$$\chi_{1} = (1,2,0)^{T} \quad y_{1} = +1$$

$$\chi_{2} = (1,2,2)^{T} \quad y_{2} = +1$$

$$\chi_{3} = (1,0,2)^{T} \quad y_{3} = -1$$

initial assignment of ω is $[0,6,6]^T$

Iteration 1: Checking xr

$$\omega^{7}x_{1} = (0,6,6) \cdot (1,2,0)$$
= $0(1) + 6(2) + 6(0)$
= 12

sign(12) = +1 (value is greater than threshold and no need to update)

since $y_{1} = +1$

Iteration 2: Checking x2

$$\omega^{T}x_{2} = (0,6,6) \cdot (1,2,2)$$

$$= 0(1) + 6(2) + 6(2)$$

$$= 24$$
sign(24) = +1 (no need to update)

since $y_{2} = +1$

Q1) Manual Calculations

given Data

$$\mathcal{D}_{ata}$$

$$\chi_{1} = (1,2,0)^{T} \quad y_{1} = +1$$

$$\chi_{2} = (1,2,2)^{T} \quad y_{2} = +1$$

$$\chi_{3} = (1,0,2)^{T} \quad y_{3} = -1$$

initial assignment of ω is $[0,6,6]^T$

Iteration 1: Checking xr

$$\omega^{7}x_{1} = (0,6,6) \cdot (1,2,0)$$

$$= 0(1) + 6(2) + 6(0)$$

$$= 12$$

sign(12) = +1 (value is greater than threshold and no need to update)
since y, =+1

Iteration 2: Checking 22

$$\omega^{T}x_{2} = (0,6,6) \cdot (1,2,2)$$

$$= 0(1) + 6(2) + 6(2)$$

$$= 24$$

$$sign(24) = +1 mtext{(no need to update)}$$

$$since y_{2} = +1$$

Iteration 3: Checking x3

$$\omega^{7}k_{3} = (0,6,6) \cdot (1,0,2)$$

$$= 0(1) + 6(0) + 6(2)$$

$$= 12$$

$$\text{sign}(12) = +1 \quad (\text{need to update since } y_{3} = -1)$$

updating w

$$\omega = \omega + y_3 x_3
= (0,6,6) + (-1)(1,0,2)
= (0,6,6) + (-1,0-2)
= (0-1,6-0,6-2) + (0$$

Iteration 4: Checking 2, again

$$\omega^{T} \chi_{1} = (-1,6,4) \sim (1,2,0)$$

$$= -1(1) + 6(2) + 4(0)$$

since he = 41

sign(11)=+1 (no update needed, y1=+1)

$$\omega^{T}x_{2} = (-1,6,4), (1,2,2)$$

$$= -1(1) + 6(2) + 4(2)$$

$$= -1 + 12 + 8 = 19$$
sign (19) = +1 (no update needed $42 = +1$)

Iteration 6: Checking x3 again

$$\omega^{T}x_{3} = (-1,6,4) \cdot (1,0,2)$$

$$= -1(1) + 6(0) + 4(2)$$

$$= -1 + 0 + 8 = 7$$

$$= -1 + 0 + 8 = 7$$

$$= -1 + 0 + 8 = 1 \text{ (incorrect, because } 4_{3} = -1)$$

updating
$$\omega = \omega + q_3 z_3 = (-1, 6, 4) + (-1)(1, 0, 2)$$

$$= (-1, -1, 6 - 0, 4 - 2)$$

$$= (-2, 6, 2)$$

1+ = (3) abro

3 3 N+0+6- = (reed to update 43 = -1)

Iteration 7: Checking
$$x_1$$
 again

 $\omega^T x_1 = (-2,6,2) \cdot (1,2,0)$

Iteration 8: Checking
$$12$$
 again

 $\omega^{T}_{12} = (-2,6,2) \cdot (1,2,2)$
 $= (-2)(1) + 6(2) + 2(2)$
 $= -2 + 12 + 4$
 $= 14$
(no update needed)

sign (14) = +1 (no update needed)

Iteration 9: Checking x_3 again $\omega^{7}x_3 = (-2, 6, 2) \cdot (1, 0, 2)$ = -2(1) + 6(0) + 2(2) = -2 + 0 + 4 = 2sign (2) = +1 (need to update $y_3 = -1$)

updating ω $\omega = \omega + 43^{2}3$ = (-2, 6, 2) + (-1)(1, 0, 2) = (-2 - 1, 6 - 0, 2 - 2)

=(-3,6,0)

Iteration 10: Checking x, again

 $\omega^{T} \chi_{1} = (-3,6,0) \cdot (1,2,0) = -3(1) + 6(2) + 0(0)$ sign (9) = +1 (no update needed)

Iteration 11: Checking 22 again $w^{\dagger}2 = (-3,6,0) \cdot (1,2,2) = -3(1) + 6(2) + 0(2)$ sign(9) = +1 (no update needed)

Iteration 12: Checking x3 again

 $\omega^{T}x_{3} = (-3,6,0) \cdot (1,0,2) = -3(1) + 6(0) + 0(2)$ xign(-3) = -1 (no update needed)

hence the final weight vector, to = (-3,6,0)
